

AC35 Magnetic Drill Press Update

November 2010

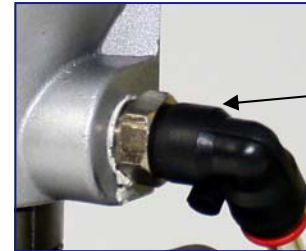

We have made an engineering design change to the AC35 Magnetic Drill Press which improves the flow of lubrication. This modification involves an update to two machine components, 1) Gearbox housing and 2) Coolant connector.

Older AC35 Mag Drills

The older version AC35 (prior to October 2010) has the elbow style coolant connectors (AC3508) that have a 1/4" NPT Pipe Thread. In addition, the gearbox housing (AC3517) is needed to accommodate the elbow coolant connector.

New AC35 Mag Drills

AC35's from October 2010 have a straight coolant connector (AC3508Q) that have a 1/8" NPT Pipe Thread. In addition, the gearbox housing (AC3517Q) is needed to accommodate the straight coolant connector.
